Summary:

To work with data to discover meaningful insights that can support better decision making. I worked on projects that are based on AI/ML models and industry-level technologies. I like solving real-world problems using data-driven approaches and building scalable AI solutions. This passion led me to win a National-Level Hackathon. I continuously improve my skills by working on practical projects and exploring modern AI and machine learning technologies, and I enjoy learning new technologies that improve development efficiency and performance workflow.

Skills:

- **Programming:** Python, Data Structures & Algorithms, OOP
- **AI/Machine Learning:** Supervised & Unsupervised Learning, CNN, Model Evaluation, Prompt Engineering, LLM, GenAI
- **Data Engineering:** ETL/ELT Pipelines, Data Warehouse, Data Pipeline Automation
- **Databases:** SQL, DBMS Concepts, Apache Kafka
- **Frameworks & Tools:** SDLC, Agile Methodology, Flask, REST APIs, Power BI, Excel, Git, GitHub, CI/CD (GitHub Actions)
- **Soft Skills:** Leadership, Communication, Teamwork, UML Explanation and Collaboration

Education:

- **B.Tech in Computer Science Engineering, Parul University, (2022-26) CGPA – 7.62**
- **12th Maharashtra Board, (2021–2022) - Percentage 74.83%**
- **10th Maharashtra Board, (2019–2020) - Percentage 75.40%**

Experience

- **Celebal Technologies - Data Science Intern** **[May 2025 - July 2025]**
  - Processed and analyzed large datasets using Pandas, improving reporting efficiency.
  - Built ML classification models with accuracy through **feature engineering** and hyperparameter tuning.
  - Evaluated model performance using **F1-score, and precision-recall** metrics to ensure reliability.
  - Collaborated with cross-functional teams to improve model scalability and efficiency using Git for version control and team-based development.

Projects

Style Secure Zone

- **Engineered an AI-powered Secure Zone system** for a Virtual Try-On platform using **image processing and anomaly detection models** to prevent unauthorized(hidden cameras) access.
- **Integrated Image-based detection features** using the VTON Model to enhance user interaction and automated security validation.
- **Implemented data pipelines** for image preprocessing, model training, and real-time monitoring using **OpenCV, MediaPipe and Python**.

Game Content Generator

- Built **an AI game content generator** using a user-provided prompt that automatically generates characters, quests, items, and lore, improving content-creation efficiency for game designers.
- Enabled **AI Model, web, and Python** for flexible, automated content generation, ensuring diverse, contextually relevant content.
- Implemented **customizable controls** (temperature(Randomness), seed(Reproduce same), length) to produce diverse outputs.

Industrial Instrument Detection

- **Built a CNN model** using **TensorFlow, Keras, and OpenCV** for **computer vision–based image classification** with high accuracy.
- **Analyzed and visualized model results** using **Matplotlib and Seaborn** to evaluate performance and optimize deep learning outcomes.

Achievements:

- **Certification**: YBM Data Science & ML Course
- **National Level** Hackathon Winner [LinkedIn Post]
- **Team Leader & Class Representative**
- **Coordination:** Team Coordinator
- **Published research paper: 'Vistara'** [Research Paper Link]
- **Freelancing Work in AI/ML (Part-Time)**
